Pathogens are different than normal body tissue. They have an electrostatic charge

that interacts with the miracle mineral supplement molecule. This unique molecule is a strong oxidizer and works powerfully as it interacts with the

pathogens. And it operates in the same way every time. It will not cause the pathogen to change over

time so the body cannot build up immunity to it. The means by which miracle mineral solution and the pathogens interact will always be the same and therefore will always work in same together.
